~A New Medium On The Streets~

Pascal Lab

A New Image “Slides” Into The Town

Pascal Lab

“PASCAP” is a non-rotating wheel cap even when a car runs. So the image drawn on it doesn't rotate either. It is a unique product with the best combination of a bearing, a weight and air stream. We invented the first version in Japan more than 25 years ago and we obtained patents in many countries including Japan. Now we have created the new version of it with the new patent!!

Past runs of Version 1

We provided version 1 PASCAPs for various cars. Buses, taxis, delivery cars, patrol cars, etc....

More Past runs of Version 1

We also provided version 1 PASCAPs for election campaign cars.

You can use PASCAP as a campaign tool.

The new patent makes it drastically easy!!

The only challenge of version 1 was the difficulty of attaching and detatching.

It was 20 min. per wheel .

Now 2 min. per wheel !!

Dec. 2024、 patented in Japan (Pat. No.7 6 0 6 4 9 9)

Also in process of PCT application

Frankly speaking, the biggest reason that prevented PASCAP from spreading widely was that difficulty. In Japan, commercial transportation companies including taxi companies and bus companies are required to inspect the tire condition of their cars everyday. It meant they had to remove PASCAPs everyday consuming more than an hour per car. It was quite natural for them to become avoiding PASCAPs, unfortunately.

PASCAP ver. 2 Cleared the blockade to run!!!

RWTÜV (currently TÜV NORD AG.)

Tested PASCAP

Bestätigung über die Prüfung e-Caps

21.03.2002

Hiermit wird bestätigt, dass die notwendigen Prüfungen zur Zulassung der e-Caps im Rechtsraum der BRD erfolgreich abgeschlossen wurden.

Die Verwendung der e-Caps wird an allen PKW (M1-Kraftfahrzeugen) , sowie LKW und Bussen unter bestimmten Auflagen bezüglich geometrischer Randbedingungen bei der Montage und Teileausführung zulässig sein.

Ein entsprechendes Gutachten wird in Kürze erstellt werden.
